Bill of Material

Name _____ Project _____ Hour _____

Qty	Description	Rough Dimensions			Finish Dimensions			Kind Of Wood	Bd. Ft.	Cost
		T	W	L	T	W	L			

Formulas for Calculating Board Feet

1. If the length is in feet:

$$\text{Bd. Ft.} = \frac{\text{Qty.} \times \text{T'' (thickness)} \times \text{W'' (width)} \times \text{L' (length)}}{12}$$

2. If the length is in inches:

$$\text{Bd. Ft.} = \frac{\text{Qty.} \times \text{T'' (thickness)} \times \text{W'' (width)} \times \text{L'' (length)}}{144}$$
